

EXPERIMENT-36

Aim: To execute program to draw scatter plot for different groups comparing weights.

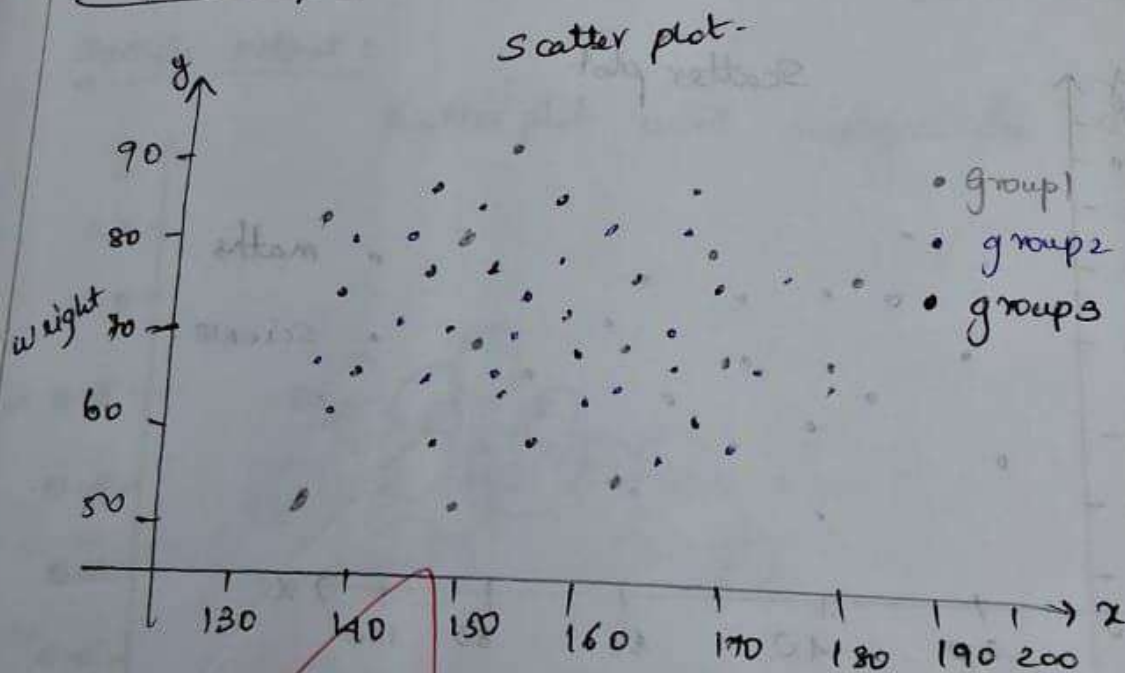

Pseudocode:

- 1) Import necessary libraries matplotlib, pyplot, numpy
- 2) Create sample data
- 3) Use scatter() method from matplotlib to plot
- 4) Label and display the plot.

Sample Input:

Sample data heights, weights of 3 groups

Sample output:

Result:

Therefore the program to draw scatter plot for different groups comparing weights executed successfully.
