Aim: To execute pandas program to plot 2 or more lines with legends different width and colors.
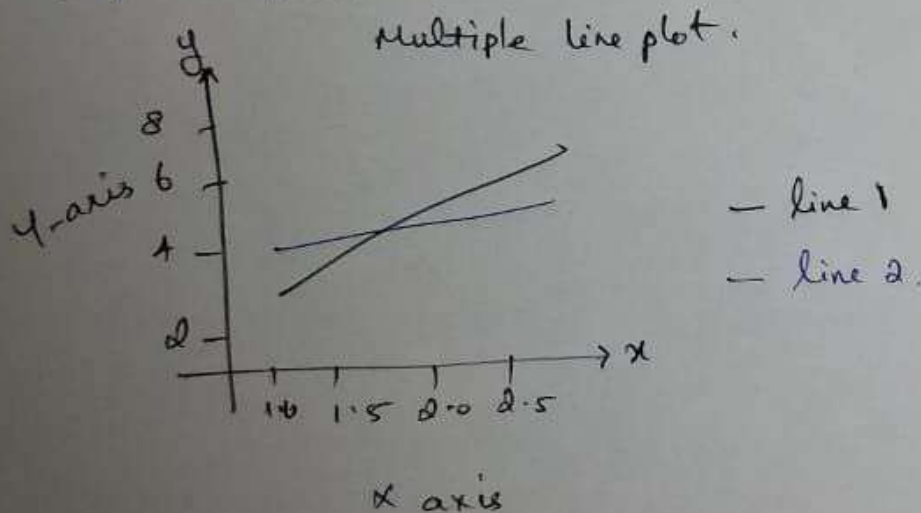

Pseudocode:

1) Import the matplotlib.pyplot

2) create a list of x and y .axis data points

3) plot using labels and x and y axis

4) Display the plot.

Sample input:

sample data [Y1, Y2, Y3]

Sample output:

Multiple line plot.

x axis

Result:

Therefore the pandas program for line plots executed successfully.

Multiple Line Plot with Different Widths and Colors
